

MISSION INTRODUCES THE ALL-NEW MXB-320

Outstanding crossbow performance and adjustability for just \$599

Sparta, Wisconsin – March 25, 2013 – The all new MXB-320™ harnesses deadly power and precision, yet maneuvers with balance and ease. Loaded with revolutionary crossbow technology for higher performance, and adjustability for ultimate comfort, the MXB-320™ will be available at Mission Authorized Retailers in May starting at just \$599 (bow only).

The MXB-320™ features a highly-efficient dual X-Cam™ that yields powerful speed (320 fps) with minimal recoil, and our ALRS™ (Adjustable Limb Retention System) allows you to customize your draw weight (180, 150, 125 and 100 lb draw weights). Our patent-pending RS (Riser Step) Tread™ acts as a foot-hold when cocking, as opposed to a foot stirrup which adds unnecessary bulk and weight to other crossbow models.

The MXB-320™'s BIAS Rail™ (Bridged Integrated Accuracy Support) is another unique feature of this crossbow that enhances both form and function. It includes a solid aluminum bridge down the centerline of the rail to provide the rigidity needed for ultimate accuracy. By beveling the arrow track on the top of the rail, we provide more surface area for the bolt to travel down - cradling it for a more accurate shot. Its cutouts on the side of the rail are also strategically engineered to minimize weight, while retaining maximum strength and accuracy.

The MXB-320™ also features an adjustable stock (3 in.), Soft-touch grips, and an anti dry-fire trigger mechanism with an automatic safety.

This model comes standard in Lost Camo AT for \$599 MSRP (bow only). The upgraded Tactical version, which features a sleek carbon finish and a six inch accessory rail for lights, bi-pod or other enhancements, is also available for \$699 MSRP (bow only).
